

Social Media Safety Tips

- Check your privacy settings monthly to ensure full protection
- Never move to a second online location or app with someone you don't know in person
- Remember, someone could always be screen-recording live conversations

- Many apps use geo-location to match users, make sure location settings are turned OFF
- Remember age and identity verifications are easily worked around
- Photos are often sold to risque sites and are publicly available for years before the subject of the photo is aware

- Have a living room charging station to keep your family safe from predators that target late-night users
- Younger children should have little to no access to live streaming apps since the content viewed is difficult to police
- What's in the background of a shot can share more personal information than intended, make sure to check before posting
